VMAC Releases The Ultimate Utility Belt: The RAPTAIR-MF Multifunction Diesel Drive

NANAIMO, B.C. – VMAC has released a new show-stopper in their RAPTAIR product line: the RAPTAIR-MF Multifunction Diesel Drive. This totally self-contained unit combines compressed air, an AC generator, welder, battery charger, booster and hydraulic capability with VMAC's trademarked Advanced Digital Controls to produce a one-of-a-kind work solution that will save money and time! In addition, this new system maintains the compact dimensions and lighter weight that is unequaled in the multifunction industry.

Years of product development, industry experience and feedback from VMAC customers culminated in the design of the RAPTAIR-MF. Created specifically for the mobile market, the system

delivers a 45CFM and up to 175 PSI and was designed to address concerns about noise, fuel consumption and emissions while providing the ultimate in job site versatility. Utilizing VMAC's state-of-the-art Intelligent Digital Controls, the 100% duty cycle RAPTAIR-MF air compressor turns itself on and off in response to air tool demand, contributing significantly to reduced idling and fuel costs as well as a greener environmental profile while still packing enough muscle to power up to a 60 lb. jackhammer or a 1-1/4" impact wrench.

The system's hydraulic capabilities include a Power Take-off Port SAE 'A' port, 2800RPM output, 35Ft-Lb continuous torque max. The system engine is a KUBOTA Diesel D902 3-cylinder, naturally aspirated 3600 rpm Tier 4 final compliant. At a mere 570 lbs., the system provides power and versatility in a compact, lightweight package.

To see an overview of the RAPTAIR-MF capabilities, visit our YouTube Channel at <http://www.youtube.com/watch?v=kPR5a0SB6hA>. For more detailed information about the system, including specifications, download the brochure at http://www.vmac.ca/publicfiles/M200077_multifunction_web.pdf.
